

Southeast Energy Management Program

Medium and large manufacturers who:

- Have at least one ISO management system in place **AND**
 - Are actively trying to manage their energy spend **OR**
 - Have organization-wide sustainability or environmental goals
- can qualify for GaMEP's 2018-2019 ISO 50001 Cohort Program

Using MEP subsidy, this cohort is a

**\$30,000 value
 for only
 \$8,000**

CLICK TO LEARN MORE

Manufacturers that implement ISO 50001, save on average, 8-14% in energy cost

➤ Year-long, phased-based program with dedicated energy coach:

- "Plan" Phase: Determine significant energy uses and improvement opportunities
- "Do" Phase: Manage energy uses and improvement actions
- "Check" and "Act" Phase: Implement system of checking processes for continual improvement
- Certification Phase (optional): Assessment and Evaluation

**Cummins Saves Over
 \$700,000 a Year**

Cummins, a global engine manufacturer, implemented the ISO 50001, energy management system, resulting in:

- 12.6% improvement in energy performance
- Savings of more than \$700,000 a year
- Primarily low and no-cost actions

➤ Benefits of joining the cohort include:

- Implementing a world-class energy management system
- 50001 Ready recognition from the Department of Energy
- Opportunity to be ISO 50001 certified
- Reduced greenhouse gas emissions
- Improved operational and maintenance efficiencies on equipment
- Building internal capacity to manage energy through included training
